

U·S·S
STRUCTURAL SECTIONS

UNITED STATES STEEL

St. Louis, Missouri
April 27, 1940

It has been noticed an error occurred in the printing of our new
USS Structural Sections Book.

Upon referring to the heading, "Section Index and Nominal Size,"
you will note the section number of the 14" sections at the top of
Page 43 reads "GBP-146". This should read "CBP-145" and we would thank
you to so correct your book.

CARNEGIE-ILLINOIS STEEL CORPORATION
Robt. Korsan, Jr., Manager of Sales.

Wm.S. Gray-MH.

USS STRUCTURAL SECTIONS BOOK

There are attached two new sheets for insertion in each Structural Sections Book sent you - one is an errata sheet which includes all corrections to date, and the other covers CB-51 and is to be inserted between Pages 24 and 25.

To insert these sheets you simply lay in correct position in the book and press the perforations into position with any blunt instrument.

ERRATA

U-S-S STRUCTURAL SECTIONS

CORRECTION

PAGE

- 13 Under Section Index CB 362 the nominal depth should be 36 in. instead of 30 in.
 25 The following corrections should be made in columns 5, 6, and 7:

		<u>Flange Th.</u>	<u>Web Th.</u>	<u>Web $\frac{1}{2}$ Th.</u>
CBL 12	22 lbs.....	$\frac{3}{16}$	$\frac{1}{4}$	$\frac{3}{8}$
CBL 12	19 lbs.....	$\frac{3}{8}$	$\frac{1}{4}$	$\frac{1}{8}$
CBL 10	19 lbs.....	$\frac{3}{8}$	$\frac{1}{4}$	$\frac{1}{8}$
CBL 10	17 lbs.....	$\frac{5}{16}$	$\frac{1}{4}$	$\frac{1}{8}$
CBL 8	15 lbs.....	$\frac{5}{16}$	$\frac{1}{4}$	$\frac{1}{8}$
CBL 6	16 lbs.....	$\frac{3}{8}$	$\frac{1}{4}$	$\frac{1}{8}$

- 28 Under Section Index 6" B14, insert P.C.B. opposite 17.25 lbs.; and add S. to 14.75 lbs.
 28 Remove bracket from 5" B15.
 30 Nominal size of H 4 should be 8 x 8 instead of 8 x 18.
 32 Under Section Index C 2, Axis 1-1 S, the figure 2.14 in the fifth line should be 21.4.
 37 Under Section Index A 7, $\frac{3}{8}$ in. thickness, change weight per foot from 2.48 lbs. to 2.50 lbs.
 41 Under Section Index A 26, $\frac{1}{4}$ " thickness, change weight per foot from 6.1 lbs. to 6.2 lbs.
 42 Under Section Index A 29, $\frac{3}{8}$ in. thickness, change weight per foot from 3.7 lbs. to 3.71 lbs.
 42 Under Section Index A 35, the entire last line, $\frac{3}{8}$ in. thickness, belongs with Section Index A 48, the group immediately following; and the District Rolled column should show C.S. instead of S.
 43 Section Index CBP 146 should be CBP 145.
 56 Section Index C 27 is shown to be rolled in Pittsburgh and Birmingham. This should be Pittsburgh only.
 58 Section Index C 28 is shown to be rolled in Pittsburgh, Chicago, and Birmingham. This should be Pittsburgh and Chicago only.
 58 Section Index C 31 should be shown as rolled "P" only for all four weights.
 58 Under Section Index C 74 the entire line following 15.6 lbs. should appear below 16.5 lbs. to conform with C 74 on page 59.
 66 Section Index A 547 should be A 645.
 94 On sketch of floor plate M 41, dimension $1\frac{1}{8}$ " should be $\frac{7}{8}$ ", and dimension $2\frac{1}{8}$ " should be $1\frac{1}{8}$ ".
 108 The seventh line of the right-hand group of figures shows a diameter of $\frac{11}{16}$ in. This should be $\frac{13}{16}$ in.
 112 The sub-heading (1 axis 1-1 and $2-2 = \frac{d^4}{12} = .08333 d^4$), should be (1 axis 1-1 = $\frac{d^4}{12} = .08333 d^4$).

Foreword

THIS publication presents those sections available for use for steel construction generally, including bridges, buildings, car and ship construction, and gives detailed data relative to dimensions and properties essential to their use. It supersedes and cancels all previous publications relating to structural sections.

This edition is issued jointly by

CARNEGIE-ILLINOIS STEEL CORPORATION

TENNESSEE COAL, IRON AND RAILROAD COMPANY

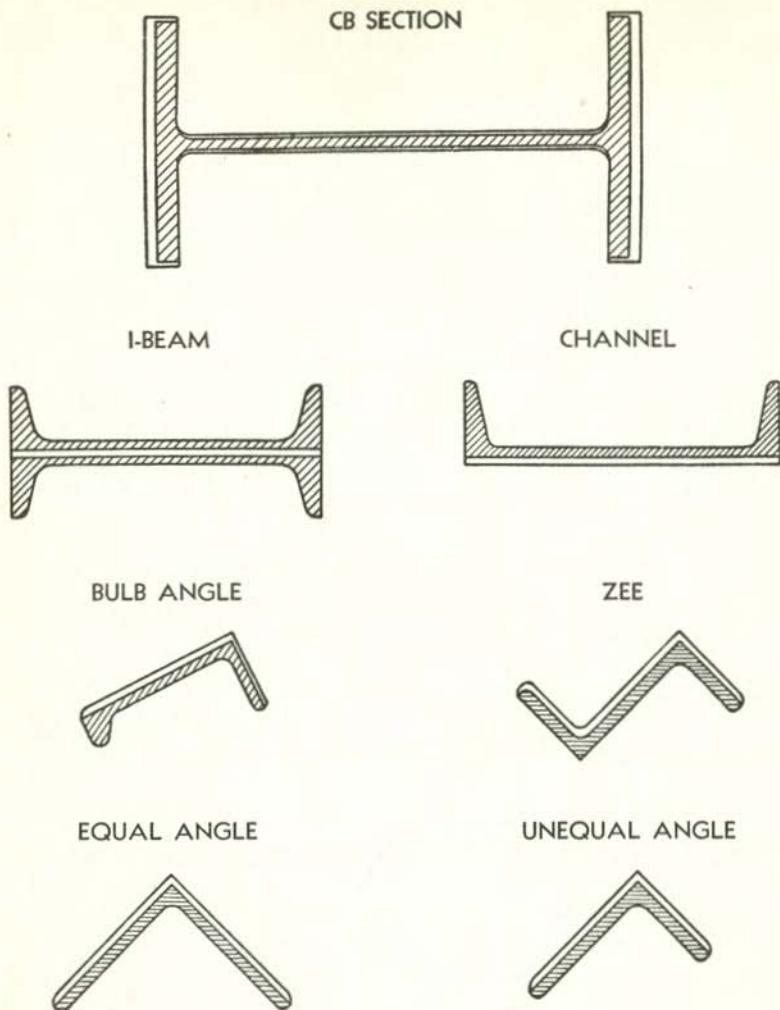

COLUMBIA STEEL COMPANY

Each company sells all the products listed, regardless of where produced.

The following symbols used with the sections indicate in which district or districts they are produced.

- P. Produced in Pittsburgh district of Carnegie-Illinois Steel Corporation.
- C. Produced in Chicago district of Carnegie-Illinois Steel Corporation.
- B. Produced in Birmingham district by Tennessee Coal, Iron and Railroad Company.
- S. Produced in Pacific Coast district by Columbia Steel Company.

METHOD OF INCREASING SECTION AREAS

The above figures show the method of increasing the sectional areas and weights of structural steel shapes. Cross hatched portions represent the minimum sections and the blank portions the added areas.

In the case of Channels and Standard Beams the enlargement of the section adds an equal amount to the thickness of the web and the width of the flanges. In the case of CB Sections equal thicknesses of metal are added to the web thickness and flange width and proportional additions to the flange thickness. In the case of Angles and Zees, the effect of spreading the rolls is to increase slightly the length of the legs. In the case of Ship Building Bulb Angles, as a rule each increase or decrease in web thickness carries with it about one-half that increase or decrease in the flange thickness.

Inasmuch as the roll passes are modified in the wear of the rolls, the actual dimensions will not always conform to the theoretical, even in the case of the minimum weight sections. Provision should be made for such variations in designing and detailing.

Rolling Tolerances

Cambering

Removal of Surface Imperfections

Method of Computation of

Weights and Properties

In the rolling of structural shapes, factors like roll wear and subsequent roll dressing, temperature variations, etc., cause the finished sections to vary from theoretical published profiles. To meet such variations, standard rolling tolerances have been established which the rolling mills are able to meet. These tolerances are shown on pages 6 and 7 and are in accordance with manufacturers' standard practice.

The limitations as to the cambering of rolled beams as a mill operation are shown on page 9. Cambering requirements for any sizes not shown may be submitted to the mill to determine whether or not they can be met.

The methods and limitations on the correction of surface imperfections as published by the American Society for Testing Materials are shown on page 8.

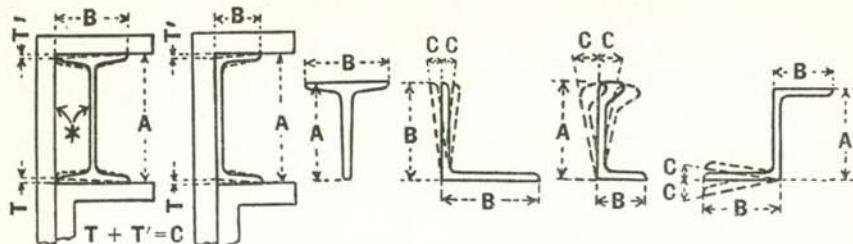

In computing the weights and properties of rolled steel shapes, the following method, in accordance with the practice adopted by the Association of American Steel Manufacturers, is used: For CB wide flange shapes, CB light beams, stanchions, and joists the fillets are included for both weights and properties; for weights of standard I beams, channels and shipbuilding bulb angles the fillets and roundings are included; for the weights of angles, tees, zees, and car building bulb angles the fillets and roundings are not included; for the properties of shipbuilding bulb angles, the fillets and roundings are included; for the properties of standard I beams and channels and for all angles, tees, zees, and car building bulb angles the fillets and roundings are not included.

LENGTH

Table 4

Nominal Size, Depth	Variations from Specified Length for Lengths Given			
	30 Feet and Under		Over 30 Feet	
	Over	Under	Over	Under
Beams 8 to 24.....	3/8	3/8	3/8, plus 1/16 for each additional 5' or fraction thereof	3/8
Beams over 24 and all Columns.....	1/2	1/2	1/2, plus 1/16 for each additional 5' or fraction thereof	1/2

When variations are specified to be all over, the sum of the over and under variations shall apply.

ENDS OUT-OF-SQUARE

1/64" per inch of depth or of flange width if it is greater than the depth.

CAMBER OR SWEEP

$$\text{Beams: } \frac{1}{8}'' \times \frac{\text{Number of feet of length}}{10}$$

When ordered as columns:

$$\text{Lengths up to 45': } \frac{1}{8}'' \times \frac{\text{Number of feet of length}}{10} \text{ but not over } \frac{3}{8}''$$

$$\text{Lengths over 45': } \frac{3}{8}'' + \frac{1}{8}'' \times \frac{\text{Number of feet of length minus 45}}{10}$$

SURFACE FINISH

A.S.T.M. SPECIFICATIONS: SHOWN UNDER FINISH CLAUSE OF A7-36, A9-36 AND A94-36

Surface imperfections that do not affect the full utility of the piece, shall not be considered as injurious defects in structural shapes $\frac{3}{8}$ inch or more in thickness. Such pieces shall be processed by the following methods in order to give them a workmanlike finish:

(1) When surface imperfections are less than $\frac{1}{16}$ inch in depth, they may be removed by grinding.

(2) When the surface imperfections are $\frac{1}{16}$ inch or more in depth, the pieces may be subjected to chipping and welding under limiting conditions as follows:

The cross-sectional area of any piece shall not be reduced more than $1\frac{1}{2}$ per cent at any point, nor shall the total area of the chipped surface of any piece exceed 2 per cent of the total surface area of that piece.

After any imperfection has been completely removed, the maximum depth of depression shall not exceed the following:

Thickness of Material Inches	Depth of Depression Max. Inches
$\frac{3}{8}$ up to $\frac{1}{2}$	$\frac{1}{16}$
$\frac{1}{2}$ up to 1	$\frac{1}{8}$
1 up to $1\frac{1}{4}$	$\frac{3}{16}$
$1\frac{1}{4}$ up to $2\frac{1}{4}$	$\frac{1}{4}$
$2\frac{1}{4}$ up to $3\frac{1}{2}$	$\frac{3}{8}$

An experienced mill inspector shall inspect the work after chipping operation to see that the defects have been completely removed and that the limitations specified above have not been exceeded. The inspector representing the purchaser shall be given full opportunity to make this same inspection. All welding shall be done by qualified welders using suitable coated welding rods. The welds shall be sound, the weld metal being thoroughly fused on all surfaces and edges, without undercutting or over-lap. Weld metal shall project at least $\frac{1}{16}$ inch above the rolled surface after welding, and the projecting metal shall be removed by grinding or by chipping and grinding to make it flush with the rolled surface and produce a workmanlike finish. Chisel marks shall be removed, leaving a smooth surface.

CAMBERING OF ROLLED BEAMS

The following information covers the limitations upon cold cambering of deep beams at the mill, as offered by the American Mills which produce wide flange sections.

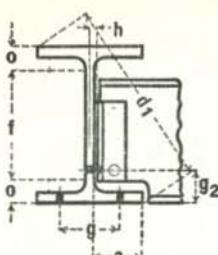

Maximum length for cambering is 100 feet.

Maximum camber, measured at mid-length, and minimum length for given cambers, is shown in table below.

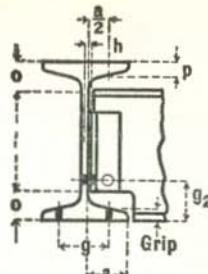

Section	Minimum Length for Given Camber								
	5" Camber	4½" Camber	4" Camber	3½" Camber	3" Camber	2½" Camber	2" Camber	1½" Camber	1" Camber
24" Wide Flange and Over.....	85'	75'	65'	55'	50'	45'	40'	35'	30'
21" Wide Flange 24" Standard.....	80'	70'	60'	50'	45'	40'	35'	30'	25'

Camber will approximate a simple regular curve from end to end (nearly) of beam, or between any two points on beam as specified. Reverse or other compound curves will not be undertaken. Camber shall be specified by the ordinate at mid-length of the portion specified to be curved. Ordinates at other points shall not be specified. The cambered ordinate may vary from that specified by $\frac{1}{2}$ inch over, nothing under.

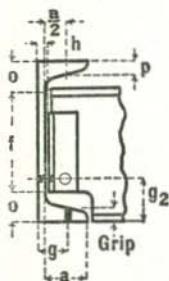

GENERAL NOTATION

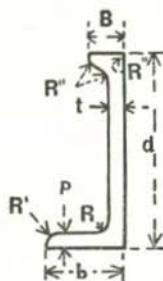

CB SECTION

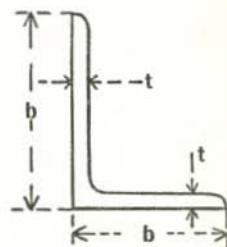

I-BEAM

CHANNEL

BULB ANGLE

ANGLE

DIMENSIONS

- a—Normal distance from near face of web to toe of flange, inches.
- B—Width of bulb, inches.
- b—Flange width, inches.
- d—Depth of section, inches.
- d_1 —Diagonal dimension, inches.
- f—Tangent distance on web between fillets, inches.
- g—Usual distance between gauge lines of flange, inches.
- g_2 —Distance from outside face of flange to nearest allowable hole on web, inches.
- h—Minimum distance from end of beam connection to center line of web, inches.
- o—Distance from point of tangent of fillet on web to outside face of flange, inches.
- p—Flange thickness, inches.
- R—Radius of fillet at root, inches.
- R' , R'' —Radius of roundings, inches.
- T—Thickness of bulb at root, inches.
- t—Web thickness, inches.
- t' —Thickness of bulb at toe, inches.

PROPERTIES

- I—Moment of inertia about center of gravity, inches⁴.
- P_I —Polar moment of inertia, inches⁴.
- r—Radius of gyration, inches.
- S—Section modulus, inches³.
- x, y—Distance from neutral axis to extreme fiber, inches.

Any deviation from the above notation is noted at the points of exception.

REGULAR SHAPES

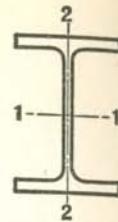

STUCTURAL SHAPES shown in this section, for which there is a popular and constant demand, may be secured promptly from frequent rollings. Designers should keep this in mind when making up their specification, to avoid unnecessary delay.

STRUCTURAL TEES

In addition to sections of rolled tees the following series include sections produced by shearing or gas cutting either standard beams or CB sections.

The following tolerances, over or under, apply to the depth $d/2$ of the tee which is one-half of the beam depth:

Beams 8" to 15" incl.... $\frac{3}{16}$ " Beams 21" to 24" incl.... $\frac{5}{16}$ "

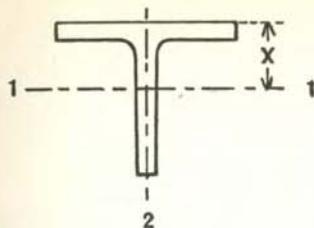

Beams 16" to 20" incl.... $\frac{1}{4}$ " Beams over 24"..... $\frac{3}{8}$ "

The above tolerances for depth of tees include the allowable tolerances in depth for the beams before splitting. Tolerances both for dimensions and straightness, as set up for the beams from which these tees are cut, will apply.

These sections should be ordered either in pairs or so as to utilize all of the beam from which they are produced.

All structural tees are produced in Pittsburgh District only.

For key to symbols in first column, refer to page 3.

SPECIAL SECTIONS

STRUCTURAL SHAPES in this group are, due to a fluctuating demand, rolled only at irregular intervals, and then generally after special arrangements have been made with the mill.

Unless the tonnage of any one size is sufficient in itself to warrant a rolling, a "Regular" structural shape should be specified if possible. Where "Special" shapes must be used the matter should be referred to the nearest district office for information as to deliveries.

Gages g are usual standard gages, but may be varied if conditions require.

Gages g² are based on 1 1/4" edge distance (7/8" maximum rivet).

*C 193 and C 21 are identical with C 192 except flanges are flared out to 3 1/8" at toe of flanges. C 21 not rolled to 5.8 lb.

MAXIMUM AND MINIMUM HORIZONTAL LEGS FOR MAXIMUM VERTICAL LEG 19 INCHES

MAXIMUM AND MINIMUM HORIZONTAL LEGS FOR MINIMUM VERTICAL LEG 4 INCHES

Any combination of vertical leg dimensions (4" to 19") and horizontal leg dimensions (2" to 6") can be supplied within thickness limits from $\frac{5}{32}$ " to $\frac{1}{2}$ " in structural grade carbon steel.

All sections have fillet radii of $\frac{3}{8}$ " or $\frac{1}{2}$ " and rounded corners opposite fillets. Sharp corners opposite fillets cannot be furnished.

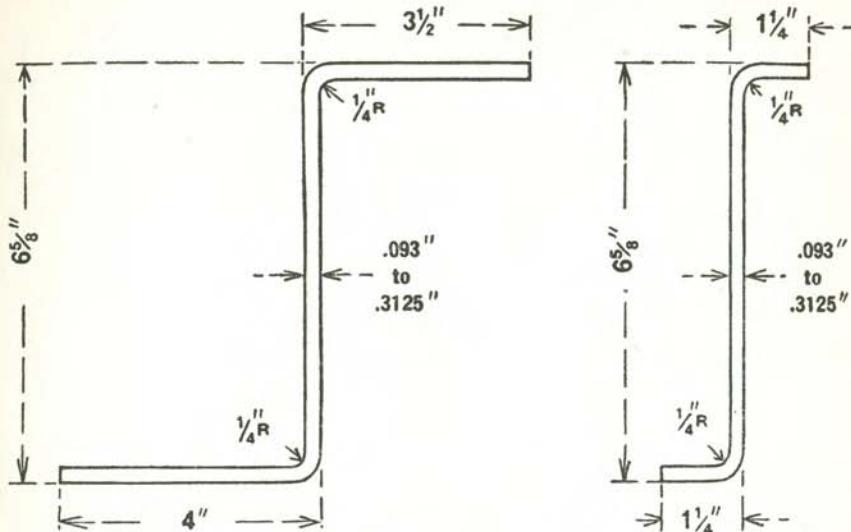

The maximum length which can be furnished is 80'. Dimensional, squareness and cutting tolerances, same as applicable to hot rolled sections of comparable size. Sections can be furnished in U.S.S Cor-Ten, U.S.S Man-Ten or regular structural grades of carbon steels.

All cold formed sections rolled only in Chicago District.

MISCELLANEOUS MATERIAL AND DATA

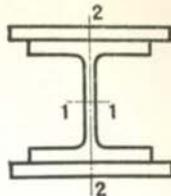

ON the following pages are listed rolled steel column bases, plates, floor plates, crane rails, crane rail splices, fastenings, and clamps, steel cross ties.

Also listed is useful data regarding cover-plated wide flange beams, areas and weights of rectangular sections, properties of plates, properties of round and square bars, bolts, nuts, structural rivets, pipe columns.

On pages 136-138 is shown a table of economy of CB beams by section modulus which enables the designer to select the most economical section for the given conditions of required strength and depth.

ROLLED STEEL PLATES FOR COLUMN BASES

The following rolled widths and thicknesses are standard sizes of rolled steel plates for use as column bases. Selections from these sizes will facilitate manufacture and delivery.

ROLLED SIZES

All dimensions are given in inches

14 x 1 $\frac{1}{4}$	28 x 3	44 x 5
14 x 1 $\frac{1}{2}$	28 x 3 $\frac{1}{2}$	44 x 5 $\frac{1}{2}$
16 x 1 $\frac{1}{2}$	32 x 3 $\frac{1}{2}$	48 x 5 $\frac{1}{2}$
16 x 2	32 x 4	48 x 6
20 x 2	36 x 4	48 x 6 $\frac{1}{2}$
20 x 2 $\frac{1}{2}$	36 x 4 $\frac{1}{2}$	52 x 6
20 x 3	40 x 4 $\frac{1}{2}$	52 x 6 $\frac{1}{2}$
24 x 2	40 x 5	56 x 6 $\frac{1}{2}$
24 x 2 $\frac{1}{2}$		56 x 7
24 x 3		56 x 8

All plates are of open hearth steel.

PLATES

ON the following pages are shown tables of sizes of carbon steel plates in rectangular and circular sheared, universal mill, heavy rectangular over 2 inches in thickness, and floor plates.

Plate requirements in excess of dimensions shown may be submitted for special consideration.

CRANE RAIL SPLICES

Rail gage for splice bars shown on page 114.

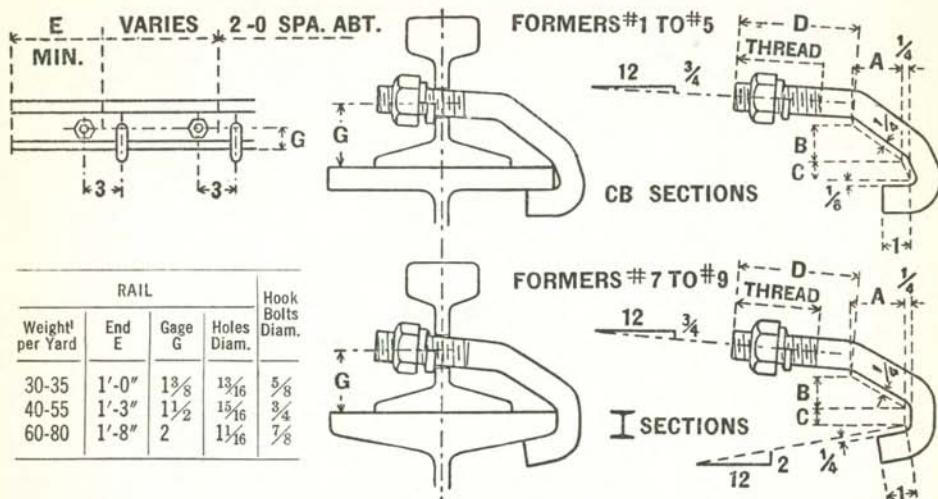

Standard splice-bars are used for crane rails and should be cut to clear rivets, if necessary.

Girder gage for rivets is given on page 117.

Rail gage for hook bolts is given on page 116.

Hook Bolts are used only where width of flange will not allow rail clamps.

Hook Bolts spaced about 2'-00" centers, and not over 3'-4" at rail splices.

Hook Bolts are made by standard formers, and only distance "D" can vary.

Hook Bolts to have hexagon nuts, and nut locks.

Hook Bolts allow rail adjustment of $\pm 1\frac{1}{2}$ ".

CRANE RAIL CLAMPS

AMERICAN BRIDGE COMPANY STANDARD

Clamp plates furnished flat and bent in field by tightening bolts.

Clamps in pairs about 3'-00" centers. Not over 4'-00" at splices.

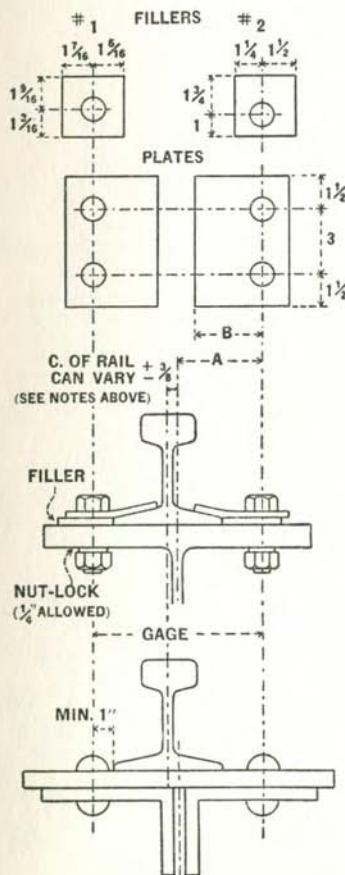

Fillers turned to bear against toe of rail after rail is aligned.

Filler No. 1. Provides for an adjustment of $\pm \frac{3}{16}$ ", varying by $\frac{1}{8}$ ".

Filler No. 2. Provides for an adjustment of $\pm \frac{3}{8}$ ", varying by $\frac{1}{4}$ ".

For runways 200 ft. long (and under) order full quota of fillers No. 1, but no fillers No. 2.

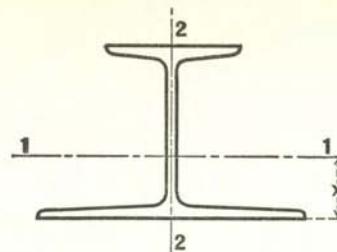

For runways over 200 ft. long (and all export work) order full quota of fillers No. 1, and in addition, 30 per cent of fillers No. 2.

13128	3	1/2	1/2	8 3/4	4 3/8					
175-418	3	1/2	1/2	8 3/4	4 3/8					

Holes in structural members to be located without regard to splices. If splice bars are found to interfere at any point, additional holes are to be drilled in field so that spacing of clamps does not exceed 4 ft.

WEIGHT OF BOLTS

SPECIAL CASES IN POUNDS PER 100

VARIATIONS IN HEADS OR NUTS

As stated on page 124, usual practice is Square Head and Hexagon Nut, "American Standard Regular." For other combinations of head and nut, or for "American Standard Heavy," make the appropriate deductions and additions of weights of heads and nuts as tabulated below, from the weights per 100 found on page 124.

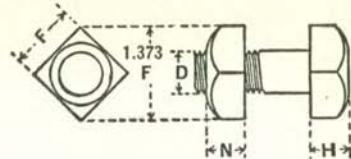

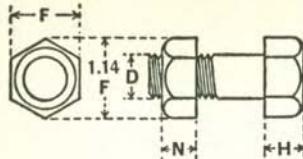

Weight of 100 Each		Diameter of Bolt, Inches										
		1/4	5/16	3/8	7/16	1/2	5/8	3/4	7/8	1	1 1/8	1 1/4
Regular	Square Heads	.7	1.4	2.2	3.2	5.1	10	18	29	42	60	84
	Hexagon Heads	.6	1.2	1.9	2.8	4.5	9	15	25	36	52	73
	Square Nuts	.81	1.7	2.3	4.1	5.6	10	14	23	35	49	67
	Hexagon Nuts	.64	1.4	1.9	3.7	4.2	9	12	18	28	42	54
Heavy	Square Heads	9.5	17	28	42	61	84	112
	Hexagon Heads	8.2	14	24	36	53	73	94
	Square Nuts	7.9	14	23	35	50	66	92
	Hexagon Nuts	6.6	11	19	28	41	56	73

HEAVY BOLTS

Weights of bolts over 1 1/4 inches in diameter may be calculated from the following data. Standard practice is "American Standard Regular" head with "American Standard Regular" or "Heavy" nut, as specified.

Weight of 100 Each		Diameter of Bolt, Inches										
		1 1/2	1 3/4	2	2 1/4	2 1/2	2 3/4	3	3 1/4	3 1/2	3 3/4	4
Regular	Square Heads	143	226	343	484	660	881	1148	1452	1830	2241	2710
	Hexagon Heads	124	196	297	419	577	764	994	1257	1585	1941	2350
	Square Nuts	116	184	276	391	539	666	874
	Hexagon Nuts	102	162	231	337	472	606	825
Heavy	Square Heads	190	295	432	608	825	1087	1401	1775	2115	2715	3312
	Hexagon Heads	162	254	377	538	727	890	1214	1526	1906	2344	2845
	Square Nuts	154	242	355	496	674	831	1082	1767	2043	2303	2969
	Hexagon Nuts	123	208	303	422	573	742	1008	1196	1485	1789	2184

BOLT HEADS AND NUTS

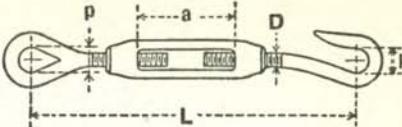

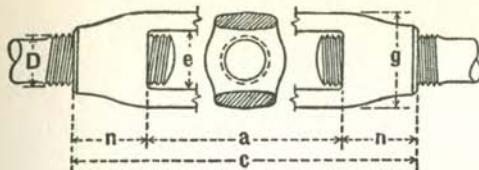

HEADS AND NUTS		American Standard Regular	American Standard Heavy		
HEAD	Height, H	$\frac{3}{8}D$	$\frac{3}{4}D + \frac{1}{16}$ "		
NUT	Short Dia., F	$1\frac{1}{2}D$	$1\frac{1}{2}D + \frac{1}{16}$ "		
		$\frac{7}{8}D$	D		
		$1\frac{1}{2}D + \frac{1}{16}$ " ($D = \frac{5}{8}$ " or less)	$1\frac{1}{2}D + \frac{1}{8}$ "		
				American Standard Bolt and Nut dimensions rounded to the nearest $\frac{1}{16}$ inch, are those adopted by American Institute of Bolt, Nut and Rivet Manufacturers and approved by American Standards Association, March, 1933. "American Standard Regular" formerly called Manufacturers Standard, American Standard, etc. "American Standard Heavy" formerly called United States Standard. Some fabricators have standard heads and nuts differing only slightly from the table. For bolts with countersunk heads the included angle is 78 degrees, the same as for rivets. See page 121 for dimensions.

*Special Sizes

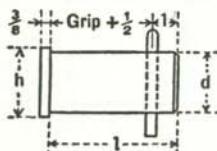

Recessed Pin Nuts similar to those listed above are available, in cast steel, for pins up to 24 inches in diameter.

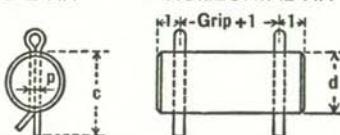

For pins over 10 inches in diameter, however, the preferred practice is a detail similar to that shown at the left, in which the pin is held in place by a recessed cap at each end and secured by a bolt passing completely through the caps and pin. Suitable provision must be made for attaching pilots and driving nuts.

TYPICAL PIN CAP DETAIL FOR PINS
OVER 10 INCHES IN DIAMETER

EXPLANATION OF TABLE OF ECONOMY OF CB BEAMS BY SECTION MODULUS

The tables on following pages list CB Sections for the given section modulus in the order of the most economical sections for various depths. Efficiencies decrease from left to right across the page.

The section modulus in the first column is the maximum for the beams listed in that line. When a desired section modulus lies between two adjacent values shown in the table, use the line of higher value.

Only the most economical shape of equal or higher section modulus is shown for any given depth. No depth is given whose most economical shape is surpassed in economy by a beam of less depth. In general, the shapes given under the heading "First Selection" are the most economical. There are, however, cases in which deeper beams of equal economy are available. If the "First Selection" is too deep for framing, use the next selection in that line which has a suitable depth. It will be the most economical CB Section for the given conditions of required strength and depth.

EXAMPLE: Select a beam for section modulus of 150 with depth not over 17 inches.

In the table, opposite the next higher section modulus, namely 150.6, we find that CB 211 x 73 is the most economical section but since the depth must be less than 17 inches, we find under column "Third Selection" that CB 163 x 88 is the proper one to use. The actual depth of this section is 16.16 inches and the section modulus 151.3 inches³.

All beams are to be secured against lateral deflection.

INDEX

A

American standard beams, properties and dimensions of.	26-31
American standard beams, rolling and cutting tolerances.	6
American standard channels, properties and dimensions of.	32-35
Angles, cold formed.	75
Angles, equal legs, properties and dimensions of.	36-38
Angles, unequal legs, properties and dimensions of.	39-42
Angles, special, equal and unequal legs, properties and dimensions of.	66
Angles, usual gages for.	121
Areas, methods of increasing.	4
Areas, of sections: see properties.	
Areas, weights, and properties of round bars.	108-111
Areas, weights, and properties of square bars.	112-113

B

Bars, dimensions and weights of upset screw ends for square and round.	128-129
Bars, table of properties and weights of round.	108-111
Bars, table of properties and weights of square.	112-113
Bases, rolled steel column.	82
Beams, properties and dimensions of American standard.	26-31
Beams, properties and dimensions of CB wide flange.	12-25
Beams, Table of economy of CB beams by section modulus.	136-138
Bearing piles, properties and dimensions of CB.	43
Bolt and nut dimensions.	126
Bolts, weight of.	124-125
Bulb angles, car building, properties and dimensions of.	64-65
Bulb angles, shipbuilding, properties and dimensions of.	62-65
Bulb angles, rolling and cutting tolerances.	6

C

Cambering of CB wide flange shapes.	9
Car building bulb angles, properties and dimensions of.	64-65
Car building channels, properties and dimensions of.	56-61
Car building cold formed sections, dimensions of.	75-78
Car building miscellaneous sections.	71-74
CB beams: See CB wide flange shapes.	
CB H bearing piles, properties and dimensions of.	43
CB joists, properties and dimensions of.	24-25
CB light beams, properties and dimensions of.	24-25
CB stanchions, properties and dimensions of.	24-25
CB steel sheet piling, properties and dimensions of.	44-45
CB structural (split beam) tees, notes on.	46
CB structural (split beam) tees, properties and dimensions of.	47-54
CB wide flange shapes, cambering of.	9
CB wide flange shapes, properties and dimensions of.	12-25
CB wide flange shapes, rolling and cutting tolerances.	7
Center of gravity of sections: See properties.	
Channels, properties and dimensions of American standard.	32-35
Channels, properties and dimensions of car building and shipbuilding.	56-61
Channels, rolling and cutting tolerances.	6
Circular sheared plates, tables of sizes.	85, 89, 93
Clevises, dimensions and weights of.	131

Cold formed sections, angles.....	75
Cold formed sections, zees.....	77
Column bases, rolled steel.....	82
Columns, cover-plated CB wide flange shapes.....	80-81
Columns, properties and dimensions of subway.....	70
Columns, properties and dimensions of pipe.....	134
Cotter pins and pin nuts, diameter and weights of recessed.....	132
Cover-plated CB wide flange shapes, properties and dimensions of.....	80-81
Crane rail clamps, table of.....	117
Crane rail fastenings, table of.....	116
Crane rail splices, table of.....	115
Crane rails, table of properties and dimensions.....	114
Cross ties, properties and dimensions of.....	118
Cutting and rolling tolerances: See tolerances.	

D

Decimals of an inch and of a foot.....	139
Dimensions, bolt and nut.....	126
Dimensions, and properties of sections: See properties.	
Dimensions, for detailing American standard beams.....	29, 31
Dimensions, for detailing American standard channels.....	33, 35
Dimensions, for detailing CB light beams, stanchions, joists.....	25
Dimensions, for detailing CB wide flange shapes.....	13, 15, 17, 19, 21, 23, 25
Dimensions, for detailing cover-plated CB wide flange shapes.....	80-81
Dimensions, for detailing crane rails.....	114
Dimensions, for detailing crane rail splices.....	115
Dimensions, for detailing crane rail fastenings.....	116
Dimensions, for detailing crane rail clamps.....	117
Dimensions, for detailing bulb angles, car building.....	65
Dimensions, for detailing bulb angles, shipbuilding.....	63, 65
Dimensions, for detailing miscellaneous car building sections.....	71-74
Dimensions, for detailing channels, car building and shipbuilding.....	57, 59, 61
Dimensions, for detailing roll'd tees.....	67-68
Dimensions, for detailing subway columns.....	70
Dimensions, for detailing zees.....	69
Dimensions of bolt head and nuts.....	126
Dimensions of loop rods and stub ends.....	130
Dimensions of structural rivets.....	121
Dimensions and weights of clevises.....	131
Dimensions of recessed pin nuts and cotter pins.....	132
Dimensions of turnbuckles and sleeve nuts.....	127
Dimensions of upset screw ends for round bars.....	129
Dimensions of upset screw ends for square bars.....	128
Districts, symbols for.....	3
Draft key and draw bar sections.....	74

E

Economy of CB beams by section modulus.....	136-138
Economy table, notes on.....	135
Eye bars, dimensions of.....	133

F

Fastenings, table of crane rail.....	116
Finish, A. S. T. M. specifications on surface.....	8
Floor plates, tables of sizes.....	94-95
Foreword.....	3

G

Gage for angles, usual	121
Gravity of sections: See properties.	
Gyration of sections: See properties.	

H

H beams, properties and dimensions of	30-31
H bearing piles, properties and dimensions of CB	43
Heads of rivets, weights of	123
Heavy bolts	125
Heavy rectangular plates, table of	86-87, 90-91

I

Increasing areas and weights of structural shapes	4
---	---

J

Joists, properties and dimensions of CB	24-25
---	-------

L

Lengths of structural rivets	122
Light beams, properties and dimensions of CB	24-25
Loop rods and stub ends, dimensions of	130

M

Miscellaneous car building sections	71-74
Miscellaneous material, notes on	79
Modulus of sections: See properties.	
Moment of inertia of sections: See properties.	

N

Notation, general	10
Notes on structural tees	46
Notes on cambering	5
Notes on column base plates	82
Notes on plates	83
Notes on surface finish	5
Notes on table of economy of CB beams by section modulus	135
Nut and bolt dimensions	126
Nuts and cotter pins, dimensions	132
Nuts, sleeve, weights and dimensions of	127

P

Piling, properties and dimensions of CB bearing piles	43
Piling, properties and dimensions of CB steel sheet	44-45
Pin nuts and cotter pins, dimensions and weights of recessed	132

Pipe columns, dimensions and properties of.....	134
Plates, tables of properties of.....	104-107
Plates, tables of sizes of floor.....	94-95
Plates, tables of sizes of rectangular and circular sheared.....	85, 89, 93
Plates, tables of sizes of rectangular heavy plates.....	86-87, 90-91
Plates, tables of sizes of universal.....	84, 88, 92
Properties and dimensions of American standard beams.....	26-31
Properties and dimensions of American standard channels.....	32-35
Properties and dimensions of angles, equal legs.....	36-38
Properties and dimensions of angles, unequal legs.....	39-42
Properties and dimensions of CB H bearing piles.....	43
Properties and dimensions of CB steel sheet piling.....	44-45
Properties and dimensions of CB joists, stanchions, light beams.....	24-25
Properties and dimensions of CB structural (split beam) tees.....	47-54
Properties and dimensions of CB wide flange shapes.....	12-25
Properties and dimensions of cover plated CB wide flange shapes.....	80-81
Properties and dimensions of crane rails.....	114
Properties and dimensions of special angles, equal and unequal.....	66
Properties and dimensions of special bulb angles car building.....	64-65
Properties and dimensions of special bulb angles shipbuilding.....	62-65
Properties and dimensions of miscellaneous car building sections.....	71-74
Properties and dimensions of special channels, car and shipbuilding.....	56-61
Properties and dimensions of special rolled tees, equal and unequal.....	67-68
Properties and dimensions of special subway columns.....	70
Properties and dimensions of special zees.....	69
Properties and weights of round bars.....	108-111
Properties and weights of square bars.....	112-113

R

Radius of gyration of sections: See properties.	
Rail clips.....	119
Rails, properties and dimensions of crane.....	114
Rectangular and circular sheared plates, tables of sizes and weights of.....	85, 89, 93
Rectangular sections, table of weights and areas of.....	96-103
Rectangular sections, table of moment of inertia of.....	104-107
Rectangular universal plates, tables of sizes and weights of.....	84, 88, 92
Regular shapes, notes on.....	11
Removal of surface imperfections, notes on.....	5
Riveting, conventional signs for.....	121
Rivets, dimensions of structural.....	121
Rivets, lengths of structural.....	122
Rivets, weights.....	123
Rolled steel plates for column bases.....	82
Rolling and cutting tolerances: See tolerances.	
Round bars, weights, areas, and properties of.....	108-111

S

Screw ends for round and square bars, dimensions and weights for upset.....	128-129
Section modulus of sections: See properties.	
Shapes, regular, notes on.....	11
Shapes, special, notes on.....	55
Sheared plates, tables of sizes of rectangular and circular.....	85, 89, 93
Shipbuilding bulb angles, properties and dimensions of.....	62-65
Shipbuilding channels, properties and dimensions of.....	56-61
Signs for riveting.....	121
Sleeve nuts, dimensions and weights of.....	127
Special sections, notes on.....	55

Square bars, weights, areas and properties of	112-113
Stanchions, properties and dimensions of CB.	24-25
Steel sheet piling, properties and dimensions of	44-45
Stub ends and loop rods, dimensions of	130
Subway columns, properties and dimensions of	70
Surface finish, A. S. T. M. specification	8
Symbols for riveting	121

T

Tees, notes on structural (split beam)	46
Tees, properties and dimensions of structural (split beam)	47-54
Tees, properties and dimensions of special rolled	67-68
Tees, rolling and cutting tolerances	6
Ties, properties and dimensions of steel cross	118
Tolerances for structural rolled shapes	6, 7
Turnbuckles and sleeve nuts, dimensions and weights of	127

U

Universal plates, tables of sizes and weights	84, 88, 92
Upset screw ends for round and square bars, dimensions and weights of	128-129

W

Weights of bolt heads and nuts	124-125
Weights of clevises	131
Weights of plates	104-107
Weights of rectangular sections	96-103
Weights of sleeve nuts	127
Weights of structural rivets and heads	123
Weights of turnbuckles	127
Weights of upset screw ends for round and square bars	128-129
Wide flange CB shapes, rolling and cutting tolerances	7
Wide flange CB shapes and Standard Beams, cambering of	9
Wide flange CB shapes, properties and dimensions of	12-25

Z

Zees, cold formed sections	77
Zees, properties and dimensions of rolled	69
Zees, rolling and cutting tolerances	6
Z piling, properties and dimensions of CB steel sheet	45

PRINCIPAL SUBSIDIARY MANUFACTURING COMPANIES OF UNITED STATES STEEL CORPORATION

CARNEGIE-ILLINOIS STEEL CORPORATION

Pittsburgh, Pa. Chicago, Ill.

ROLLED, FORGED, FABRICATED AND CAST STEEL PRODUCTS

Wide Flange CB Sections	Rails, Heavy and Light
Structural Shapes	U-S-S Controlled Steels
Plates	U-S-S Abrasion Resisting Steel
Bars	GEO Track Material
Concrete Reinforcing Bars	Splice Bars
Flats	Tie Plates
Slack Barrel Hoop	Track Bolts
Strip	Track Spikes
Column Base Plates	Cross Ties
Floor Plates	Axles and forgings
I-Beam-Lok Floor Construction	Wheels, Car and Locomotive
T-Tri-Lok Floor Construction	U-S-S Carilloy (Alloy) Steels
Steel Sheet Piling	U-S-S Stainless and
CBP Bearing Piles	Heat-Resisting Steels
Steel Mine Timbers	U-S-S High Tensile Steels

SHEET AND TIN MILL PRODUCTS

Black Sheets—	Galvanized Sheets—
Hot Rolled	U-S-S Galvanized
Cold Rolled	U-S-S Copper Steel Galvanized
Strip Steel	U-S-S Galvanized Paint Bond
Hot Rolled	U-S-S Galvanized Culvert Sheets
U-S-S Electrical Sheets	Corrugated Sheets
U-S-S Vitrenamel	Black and Galvanized
U-S-S Stainless and	Formed Roofing and Siding Products
Heat Resisting Steel Sheets	Bright Tin Plates—
U-S-S High Tensile Steel Sheets	Cokes
Blued Sheets—	Charcoals
Copper Steel Wellsville Polished	Terne Plates—
Blued Stove Pipe and Elbow Stock	Ternes
Superblue	Old Style Ternes
Long Terne Sheets	U. S. Eagle Ternes
Copper Steel Roofing Long Ternes	Fire Door Ternes
Galvannealed Sheets	Long and Short Ternes
	Tin Mill Black

LORAIN DIVISION

Johnstown, Pa.

Special Track Work and Accessories	Forged Steel Grinding Balls
Girder Rails	Carbon Steel Castings
Industrial and Mine Cars	Manganese Steel Castings
Coal Conveyors	Alloy Steel Castings
Mine Jacks	Grey Iron Castings

PRINCIPAL SUBSIDIARY MANUFACTURING COMPANIES OF UNITED STATES STEEL CORPORATION—Continued

COLUMBIA STEEL COMPANY

General Offices: Russ Building, San Francisco, Cal.

ROLLED, CAST AND DRAWN STEEL PRODUCTS

Structural Shapes	Wire—
Bars and Small Shapes	Manufacturers Wires
Concrete Reinforcement Bars	Plain or Galvanized
Strip under $\frac{1}{4}$ "	Barbed
Tie Plates	Spring
Sheets—	Wire Nails
Black	Wire Fence
Blue Annealed	Wire Rope
Galvanized	Wire Rods
Semi-Finished Material	Wire Strand
	Wire Tacks
	Steel Castings

Also distributors for Pacific Coast territory of products of all subsidiary manufacturing companies of United States Steel Corporation

TENNESSEE COAL, IRON AND RAILROAD COMPANY

General Offices: Brown-Marx Building, Birmingham, Ala.

ROLLED, FORGED AND DRAWN STEEL PRODUCTS

Structural Shapes	Axes	Sheets—
Plates	Forgings	Hot Rolled
Bars	Rails	Hot Rolled Annealed
Small Shapes	Rail Accessories	Galvanized
Hot Rolled Strip	Semi-Finished Material	Wire and Wire Products
Cotton Ties	Pig Iron	

AMERICAN BRIDGE COMPANY

General Offices: Frick Building, Pittsburgh, Pa.

STEEL STRUCTURES OF ALL CLASSES

Bridges	Dams	Towers
Buildings	Crane Runways	Poles
Viaducts	Buckle Plates	Sub-Station
Subway Structures	Barges	Tanks
Ferry Aprons	Hulls	Eyebars
Ore Docks	Turntables	Electric Furnaces (Heroult)

PRINCIPAL SUBSIDIARY MANUFACTURING COMPANIES OF UNITED STATES STEEL CORPORATION—Continued

AMERICAN STEEL AND WIRE COMPANY

General Offices: Rockefeller Building, 614 Superior Ave., N.W., Cleveland, Ohio

WIRE AND WIRE PRODUCTS

Aerial Tramways	Netting	Tacks
Bale Ties	Piano Wire	Telegraph Wire
Barbed Wire	Plain Wire	Telephone Wire
Cold Rolled Strip Steel	Rail Bonds	Trolley Wire
Concrete Reinforcement	Screw Stock	Welding Wire
Electrical Wires	Spikes	Wire Fabric
Flat Wire	Springs	Wire Fence
Hoops	Steel Gates	Wire Rope
Manufacturing Wires	Steel Posts	Wire for Manufacturing Purposes
Nails	Strand	U-S-S Stainless and Heat Resisting Steels

CYCLONE FENCE COMPANY

General Offices: Waukegan, Ill.

ORNAMENTAL AND PROTECTIVE FENCE

Chain Link Protective Fence	Chain Link Conveyor Belting
Chain Link Road Guard	Screen Cloth
Ornamental Iron Fence	Hardware Cloth
Ornamental Lawn Fence	Woven Wire Partitions Wire Baskets (Rubbish Burners)

FEDERAL SHIPBUILDING AND DRY DOCK COMPANY

General Offices: Lincoln Highway, Kearny, N. J.

SHIPS AND STEEL FABRICATION

Builders and Repairers of—	Heavy Machine Work
Merchant Ships	Steel Fabrication
Barges, Dredges, Lighters	

PRINCIPAL SUBSIDIARY MANUFACTURING COMPANIES OF UNITED STATES STEEL CORPORATION—Concluded

NATIONAL TUBE COMPANY

General Offices: Frick Building, Pittsburgh, Pa.

WELDED AND SEAMLESS STEEL TUBULAR PRODUCTS

Standard Pipe	Boiler Tubes
Copper Steel Pipe	Seamless Mechanical Tubing
Line Pipe, Casing	Aircraft Tubing
Oil Well Tubing	Seamless Alloy Tubing
Drive Pipe	Trolley Poles, Line Poles
Rotary Drill Pipe	Cylinders, Seamless Couplings
Galvanized Pipe	U-S-S Stainless and
Special Dipped and Coated Pipe	Heat Resisting Pipes and Tubes
Duroline (cement lined) Pipe	

OIL WELL SUPPLY COMPANY

General Offices: Dallas, Texas

OIL FIELD DRILLING AND PUMPING MACHINERY AND AUXILIARY EQUIPMENT

"Oilwell," "Imperial," "Wilson-Snyder" and "Erie Ball" Products	
General Machine Products	Locomotive Type Boilers
Drop and Light Hammer forgings	Swaged Nipples and Bull Plugs
Steel and Iron Castings	Special Fittings
Erie Ball Steam Engines	Wilson-Snyder Pumping Machinery

UNIVERSAL ATLAS CEMENT COMPANY

General Offices: 135 East 42nd Street, New York, N.Y.

Atlas Portland Cement	Atlas White Portland Cement
Universal Portland Cement	Atlas Lumnite Cement
Atlas Waterproofed White Portland Cement	

CARNEGIE-ILLINOIS STEEL CORPORATION

General Offices

PITTSBURGH DISTRICT, Pittsburgh, Pa.	Carnegie Building
CHICAGO DISTRICT, Chicago, Ill.	208 South La Salle Street
